Art Unit: 3752

DETAILED ACTION

Drawings

The drawings are objected to under 37 CFR 1.83(a) because they fail to show an accurate depiction of section line 2-2 in Figure 1 and section line 1-1 in Figure 2 as described in the specification. The drawings are further objected to because the angled nozzles of Figure 2 are show as non-angled nozzles in Figure 1. Any structural detail that is essential for a proper understanding of the disclosed invention should be shown in the drawing. MPEP § 608.02(d). Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Art Unit: 3752

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 1 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. In line 2, 4, and 6 of claim 1, applicant recites "jet axis (7)" which is not disclosed in the specification. Appropriate correction is required.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-5 are rejected under 35 U.S.C. 102(b) as being anticipated by Long (US Patent 4,903,364).

In regard to claims 1-5, in the same sense that the applicant's nozzle system generates a mist jet directed parallel to a jet axis from an ejector that is fed with high pressure water where the water jet from the ejector runs parallel to the jet axis and which rotates about an axis where the nozzle system is enclosed by a casing tube that is open on both ends concentric with the jet axis, Long (4,903,364) teaches a nozzle system (10) that generates a mist jet directed parallel to a jet axis (Figure 5) and comprises at least one ejector (44) mounted spaced apart on the circumferential path of the ejector (Figure 1 and 2) and is fed with high pressure water and generates a water

Art Unit: 3752

jet (Figure 5 and 7) running parallel to a jet axis and which also rotates about the jet axis where the nozzle system is enclosed by a casing tube (12) that is open on both ends and is concentric with the jet axis. Long also teaches a casing tube (12) that extends rearward at least as far as an ejector (44) where the length of the casing tube is at least twice its diameter (Figure 1).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claim 2 is rejected under 35 U.S.C. 103(a) as being unpatentable over Long (US 4,903,364).

In regard to claim two, Long as described above further teaches a nozzle system ejector system that has ejectors (44) that are slightly tiled relative to a circumerfential direction of rotation in a clockwise rotation. However, Long fails to teach a nozzle system ejector that generates a water jet that is slightly tilted relative to a circumferential direction of a counterclockwise rotation. In view of the teaching of Long, it would have been obvious to one with ordinary skill in the art at the time of the present invention to change the circumferential direction of rotation of Long from clockwise to counterclockwise so as to change that rotation in a given plane for a dispensing cleaning liquid of a nozzle system within a circumferential tubular casing.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Vastveit (US 5,462,232), King (US 6,588,679), Burchett et al. (3,593,730).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Trevor McGraw whose telephone number is (571) 272-7375. The examiner can normally be reached on Monday-Friday (2nd & 4th Friday Off).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Dave Scherbel can be reached on (571) 272-4919. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
